Sensing future IT

Senzit is a global provider of Information technology Products, consulting and services spanning across the fastest growing business hubs of the world like Australia, UAE, Singapore, & India. Since its inception in 2008, we have been mining innovative ideas and leading them to execution. With experience catering to a broad range of products that utilize Audio Video Analytics, Business Analytics and Enterprise Mobile Application development, we are bringing in change one step at a time.

With technological aptitude and a mission to merge world's leading technologies such as Enterprise Mobility, Enterprise Video Analytics, Cloud integration, and Enterprise Business Analytics, Senzit aims to transform how businesses operate. Imagine a world where justice is served irrespective of environmental deterrents, where classrooms are not bound by walls, where businesses know exactly what their customers want. Senzit has managed to transform this imagination into reality. Combined with global delivery models, agile methodologies, and framework support, Senzit provides all the elements required to help you create an enterprise ready product. Customized, yet tailor-made – these are two main elements of our service methodology. With growing pace of technology, our domain expertise also keeps evolving.

EVIDENCER
THE DIGITAL TRUTH

Evidencer is an advanced integrated digitized recording solution that captures and archives live happenings in court rooms, meeting rooms & training rooms. This hardware integrated software product captures high quality audio/video live happenings in the court room and playback whenever needed. Evidencer is a dedicated digital recording and content management solution for justice and meeting venues. Evidencer not only records the data, but analysis the data by leveraging latest technologies like Big Data, and Enterprise Video Analytics.

Evidencer Pro

Evidencer Pro is an agile and flexible digital media capturing product of Evidencer. It is the basic version of Evidencer, which is a digital recording solution for small courts, legal offices, meeting rooms, Etc. It can digitally capture meeting/court room proceedings and play them back. It has four channels of audio and video embedded within to allow recording. It also has the feature to transfer locally stored audio and video to the central server for referencing in the future.

Evidencer Enterprise

Evidencer Enterprise is one of the innovative, game changing products that has transformed and digitized the way interactions and evidences are leveraged for delivering business value. Senzit's Evidencer Enterprise product suite is built on the philosophy of "Trust, Speed and Transparency" delivering a high quality, efficient, effective and collaborative approach towards the overall decision making and the justice process. One of the key differentiating product features is the Live streaming of data information using the product's Central Broadcasting Server.

Building smarter **GEN.**

CyberClaz is a solution for recording, storing and playback of lectures in classrooms. It provides archived lectures, allows students to review lecture at their own pace and convenience. CyberClaz helps students make up a missed class by providing the convenience of watching lectures on demand. It offers lecturers more flexibility in note-taking. CyberClaz has potential for increased retention of class materials and hence students can watch the videos on demand, during their exam times. CyberClaz provides two unique feature in the Lecture capturing system- Translation and Behavior Analytics. Translation enables Non-English students to translate and understand the lecture. Behavioral Analytics help Parents in analyzing and keeping a track of the behavior of the student and it helps Universities in the grading system.

Smarter Census

The Census results play a very important role in national and sub-national policies and plans for socioeconomic development, research, and even business purposes. Cost, the amount of resources, workload of local government and data release are some of the major issues of the conventional census system. Smarter Census is introduced to minimize the cost of census-taking and maximize efficiency of available resources.

Smarter Census is a revolutionary smart technology integrated for paperless survey solutions. It provides a simple, accessible survey system that is inviting and user-friendly with fast and flexible reporting that delivers real-time data in a consistent and usable format.

Automated data collection
and data entry

Real-time reporting and data
analysis

Customized output formats:

Smarter Government

The Government has many sectors. Each sector is interconnected in a way or other. These sectors need to coordinate with each other to work smoothly. With the aid of Smarter Government solutions, we can smarten all these sectors of the Government. This includes 'one stop shopping', information sharing and collaboration across regions and borders for the benefit of both citizens and government. Smarter Government helps in reorienting existing Government structures and to rebuild the existing policies in order to help citizens to improve transportation system, public safety, security measures and efficient management of resources.

Our government solutions, technology and consulting can help improve citizen services, build intelligent transportation systems, improve public safety, strengthen national security, and manage resources more effectively. Approaches that use analytics, shared services and collaboration will enable tangible and real transformation that benefits the public, government and the society at large.

LAW AND JUSTICE

SenzIT

SMARTER JUSTICE

Smarter Justice is a concept, a smarter process where the entire courtroom is rigged with cameras, LCD TV screens and other sophisticated gadgets. Most of the countries and states haven't upgraded their courts with this system of live screen shots and live recording of the events that take place in the courts and the trial rooms. Smarter Justice brings order and proper coordination by digitally documenting the statements and the entire happenings. The system, the so called Smarter Justice contains unique, innovative product suite enabling a transformation in the justice system.

Enterprise Mobility

Senzit Consultancy group determines the right enterprise mobile strategy offers niche mobility solutions for smart devices and applications. It consults how the business process should be aligned to IT and supports workers using the mobile devices. To win and stay ahead in today's competitive business environment, you have to be at the top of your game. As a result of which, companies must find new ways to innovate, optimize business processes, shorten cycle times, and empower employees to serve customers better. To achieve these benefits, companies are increasingly putting mobile technologies into the hands of front-line executives. This enables greater customer satisfaction and enhanced product selection while maximizing supply chain efficiencies and accuracy that increases operating margins.

Enterprise Video Analytics

Intelligent Video Analytics can help efficiently transform industrial processes and can provide a high level of security, 24x7, in locations such as factories, warehouses, construction sites, and office buildings. Wide, open areas and multiple sites of interest can be monitored efficiently from a remote location for activities such as employee and vehicle movement. This can help prevent potentially threatening activities, unauthorized entry into facilities, or to act as "extra eyes" for employee safety. In addition, intelligent video analytics allows for unmanned warehouse monitoring, night time construction site monitoring, and monitoring of dangerous areas to help protect your assets. Unlike conventional video analytic solutions, the Senzit solution is seamless and efficient – and can be easily customized to meet monitoring requirements without major investment.

SAP Practices

Senzit, with its ability to sense the future of IT and its competency on SAP solutions, strongly feels that it could empower your enterprise, your "inquisitive" employees, partners and customers with SAP solutions. In partnership with SAP, Senzit can help you with holistic, end-to-end solutions that can transform your organization and position you to take advantage of the tremendous market potential in today's over empowered, always on, technology enabled business & customer landscape. Senzit understands the business landscape and appreciates that every organization is unique and so the business needs are also unique and very special but with SAP solutions, which are best of the breed and has smart integration capabilities, we can start with what is needed now, and scale up as your business expands & scales. We sense the future of IT and find the below SAP solutions of strong relevance in today's competitive business landscape:

Application Development

Senzit has a proven, matured and robust Application Development and Maintenance (ADM) process that follows the complete SDLC, starting from Business Requirements, Design, Development, Testing, User Acceptance phase to Production deployment and ongoing support and maintenance.

Every user is unique and Senzit, with its ability to sense the future of IT business, and its competency on app development services ensure that our business solutions are unique and competitive. A world of endless possibilities lies ahead that requires users' needs to be addressed with innovative apps. We just don't focus on user solution but change the way they work. If you are a company that has taken time to go through the portal and requires custom app development services or has an internal development team with challenges and constraints, we are a dedicated team of professionals eager to help you.

The team of Senzit Application Development ensures that you are powered with a great way to design and deliver those apps that are required to boost your business. App development process at Senzit is quick, visible, enriching, accomplishing you to deliver apps that provide immediate benefits to your users and. You won't have to apply onerous process and excessive resources to make a difference to your business, though it may mean focusing your efforts differently than you would with a typical in-house development project.
